

PASSWORD RESET GUIDE

=====

This document describes the complete password reset process for YourSaaS Product.

Initiating A Password Reset

To reset your password, navigate to the login page at app.yoursaasproduct.com and click the "Forgot Password?" link below the login button. Enter the email address associated with your account and click "Send Reset Link."

A password reset email will be sent to your registered address within 2 minutes. The email subject will be "Reset your YourSaaS Product password." If you do not see it, check your spam or junk folder.

Reset Link Validity

Password reset links are valid for 24 hours from the time they are generated. After 24 hours, the link expires and you must request a new one. Each link can only be used once. Clicking the link a second time will show an "Invalid or expired link" error.

Setting A New Password

After clicking the reset link:

1. You will be taken to the password reset form
2. Enter your new password (must meet password requirements listed below)
3. Re-enter the new password to confirm
4. Click "Set New Password"
5. You will be redirected to the login page
6. Log in with your email and new password

Password Requirements

Your new password must:

- Be at least 12 characters long
- Contain at least one uppercase letter (A-Z)
- Contain at least one lowercase letter (a-z)
- Contain at least one number (0-9)
- Contain at least one special character such as: ! @ # \$ % ^ & *
- Not be the same as your previous 10 passwords
- Not contain your email address or first/last name

Common Reset Issues And Solutions

Issue: "I did not receive the reset email"

Solution:

1. Check your spam and junk folders
2. Search for emails from noreply@yoursaasproduct.com
3. Verify you entered the correct email address
4. Wait 5 minutes and check again (occasional email delay)
5. Try requesting the reset email again from the login page
6. If still not received, contact support at support@yoursaasproduct.com

Issue: "The reset link says it is expired"

Solution: The link has been active for more than 24 hours. Go back to the login page and click "Forgot Password?" to request a new link. Use the new link immediately.

Issue: "The reset link says it is invalid or already used"

Solution: Each reset link can only be used once. If you clicked the link more than once, the second click will fail. If you never successfully changed your password, request a new reset link.

Issue: "My new password does not meet requirements"

Solution: Ensure your password is at least 12 characters and includes uppercase, lowercase, a number, and a special character. Avoid using your name or email address in the password.

Issue: "I reset my password but still cannot log in"

Solution:

1. Confirm you are using the NEW password (not the old one)
2. Check for Caps Lock being enabled
3. Try copying and pasting the password rather than typing
4. Clear your browser cache and cookies and try again
5. If the account remains inaccessible, contact support

Resetting Password For Sso Accounts

If your organization uses Single Sign-On (SSO), your password is managed by your company's Identity Provider (such as Okta, Azure AD, or Google Workspace). Password resets for SSO accounts must be performed through your company's IT department or self-service portal. The YourSaaS Product password reset flow does not apply to SSO-managed accounts.

Resetting Password When Mfa Is Enabled

If you have Multi-Factor Authentication enabled, you will be prompted to enter your MFA code after setting your new password. If you have lost access to your MFA device, use a backup recovery code during the login process. If you do not have recovery codes, contact support for account recovery assistance.

Admin Password Reset For Team Members

Workspace Admins can trigger a password reset for any team member:

1. Go to Settings and then select Team
2. Find the team member and click on their name
3. Click "Reset Password"

4. The team member will receive a password reset email
5. Their current session will be invalidated immediately for security

Security Notice

YourSaaS Product staff will never ask for your password via email, chat, or phone. If you receive such a request, it is a phishing attempt. Report phishing emails to security@yoursaasproduct.com.

After resetting your password, we recommend reviewing your active sessions at Settings then Security then Active Sessions, and revoking any sessions you do not recognize.

Contact Support

If you are unable to reset your password after following all steps in this guide:

Email: support@yoursaasproduct.com

Subject line: Password Reset Issue - [your account email]

Include: your account email address, the browser and operating system you are using, and a description of the specific error message you see.

Our support team is available Monday through Friday from 9 AM to 6 PM UTC and will respond within one business day.
